Introduction - by The Dollar Vigilante founder, Jeff Berwick

Hello!

I don't know how you came across this e-book.
But, your life may be forever changed once you
read the information below.

Are you ready to be changed forever? As Neo was
asked in the movie, The Matrix, do you want to take
the red pill?

If you so choose you will become aware that almost
everything told to you by the government,
mainstream media, schools and society are almost
all lies.

This is your last chance to turn back.

Some people don't want to know the truth. To go on living in ignorance (not knowing) seems
safe and comfortable to some. But I will tell you now, it is the farthest thing from safe. And
soon, it won't even be comfortable.

But it is your choice. So, if you do not want to begin to see the truth do not read any further.

And, if you are still reading, welcome! You are about to join a special club!

WHAT IS THIS GUY TALKING ABOUT?

Perhaps you found this e-book from a flyer handed out to you on the street. Or, forwarded to
you by a friend or colleague.

Strange, right?

Well, perhaps you were meant to hear this. I don't believe in coincidences.

My name is Jeff Berwick and I am the founder of The Dollar Vigilante. We began in 2010 with
the tagline, "Surviving and Prospering, During and After the Dollar Collapse".

I stated then, that by the end of the decade the entire world monetary and financial system would be in collapse.

Don't think it would happen? It's already happening!

This entire "coronavirus pandemic" and worldwide lockdown is a cover, and excuse, for that collapse.

But, "people are dying!" you might say.

Yes, just like every year. The seasonal flu kills over 500,000 people per year. In fact, Covid-19, in 2020, has hospitalized or killed less people than the influenza season just two years ago.

But, the government and the media says it is a crisis!

Ah yes, like they always do.

I won't take you too far down the rabbit hole just yet.

But, this e-book we have put together gives you a lot of information to survive and prosper through what is currently going on.

Most people will end up bankrupt, businesses closed, jobs lost and worse throughout all of this. And, it isn't because of Covid-19. It is part of a larger agenda.

But, for the moment, please read through what we offer here. It will give you some good information on protecting yourself and your wealth as this manufactured crisis continues.

Should you wish to know more afterwards you can watch our videos. Youtube has been taking most of our videos down lately (because we are exposing the truth) but as of this writing we are still on Youtube [HERE](#). If you want to see all our videos though, you can see them all at [Bitchute](#) or [LBRY](#).

And check out our website at www.dollarvigilante.com for more.

I wish you well on your journey and should you continue on, congratulations. You are now part of the resistance!

Best regards,

Jeff Berwick

The Coronavirus Story

In the Beginning...

Once upon a time there was an evil king who came from a land called Seattle, Washington. He was a very rich king, but he wanted more money and more control. So he joined forces with other rich leaders around the world and together they came up with a wicked plan to conquer all of humanity and force them into financial slavery.

But the king and his friends knew that the people were rebellious and they were not easily fooled. They figured out that the only way to control the people was by taking away their freedom and managing it through fear.

So the king used all his computers and all his men and they created simulations to see how mankind will react when faced with overwhelming chaos in all the lands. And they called these practice runs 'Lock Step' (2010), 'Clade X' (2018) and 'Event 201' (2019).

The Gates Foundation denied developing trackable vaccine data and “implanting everybody with a global ID”. Instead they said “It’s about creating digital certificates that would expand home-based, self-administered testing for COVID-19.” “The microchip assertion is unrelated”, they said. “We’re just proposing keeping a record of vaccination on a patient’s skin. That’s why we tested an invisible dye that could last up to five years and be read with a specially adapted smartphone.”

Their computer models showed them that all they had to do was create a problem and then use media propaganda to make the people panic and react to it. Once they had achieved total economic chaos, they would solve it with a pre-made solution – a “Digital Certificate” to identify who received the Covid-19 nanochip vaccination. The kings would roll out their technology to remotely identify and control every single human being on the planet, thus sealing their plans for a one world government.

They saw it was a flawless plan, so they made the experiment viral.

And they called it Covid-19.

The Awakening

Thirty million people were told to stay in their houses, close their businesses and lose their jobs, or be subjected to horrible death-by-virus, steep fines, prison sentences or public humiliation. And they did so quietly, without protest. They believed that their kings would never betray their trust and willingly climbed into the boxcars that took them to the sanitation camps. They waited in desperate anticipation for the vaccination that would track every move they or their children make.

And the kings smiled and celebrated as they handed out money because they knew they were strengthening their chains of world domination through global debt and dependence.

But then some of the brave people started waking up to the fact that less than 300 000 people out of seven billion died...about the same rate as a run-of-the-mill flu season.

- Doctors Dan Erickson, Artin Massihi and Rashid Buttar risked professional scorn to tell the truth: that lockdown orders are unnecessary.
- Dr. Ngozi Ezike, director of the Department of Public Health (Illinois) admitted that anyone who passes away after testing positive for the virus must be counted as a Covid death, so “technically even if you died of a clear alternate cause, but you had COVID at the same time, it's still listed as a COVID death.”
- Organizations like the CDC swallowed their embarrassment by admitting that “it’s much less dangerous for children than a typical influenza AND that the COVID-19 hospitalization rates are “similar to” those in the 65 and older category during “recent high severity influenza seasons.”
- The World Health Organization (WHO) lauded Sweden’s refusal to lock down as “a model for other countries”.

And a few brave men and women woke up others, and *they* woke up others and soon there were millions of people who knew the truth and were looking for communities to join to make them stronger. Communities of people who weren’t scared of the kings anymore, because there *is* strength in numbers and the truth *does* set you free.

The End

The end of this story is yours to write. Think carefully.

- Do you like a world where the government and the central bank manipulate your money's worth?
- A world where martial law says they can tear your parents or children away from you in your house?
- Where they can track your every move and every transaction?
- Is this the world you want your children to inherit?

JOIN THE DOLLAR VIGILANTE

Join [The Dollar Vigilante](#) for the facts no one wants you to hear. Bill Gates is saying he will save us from Covid-19 through vaccines that will enable mass surveillance — this is not a secret, it's not a conspiracy, it's an easily traceable fact. So is the rest of this “story”.

Follow us on [BitChute](#), [LBRY](#), [Facebook](#) and [YouTube](#).

Openly question anyone's authority over your freedom of movement, freedom of speech and freedom of ownership. Most importantly, retain and consciously feed your freedom of thought.

You are in control. You make your own choices.

How will you survive in a world where money is worthless and currencies have collapsed?

This eBook is compiled by some of the best anarcho-capitalist investment minds from around the world. *Their* success depends on the following Financial Freedom Strategies:

Invest In Real Money... Not The Fed's Fake Money

...or start collecting shells...

At the Dollar Vigilante, we've been telling people for a while that there are only a few more years left before the ultimate day of reckoning for the financial system... and that day is here.

As over 30 million Americans apply for unemployment checks, the Federal Reserve and all western central banks are busy printing enough money to get the system through for another few years... just enough for them to get out of office and retire to their Caribbean island villas before all the western fiat currencies enter hyperinflation.

At the same time money's trading value is becoming about as useful as seashells, the Covid crisis is creating one final bubble: Gold and Silver mining stocks and bullion! The tech bubble is dead. The housing bubble is dead. And the bubble in government debt is in its death throes.

To protect yourself and profit from the collapse, you need to own gold and silver bullion and shares in the miners who produce precious metals:

- Owning gold and silver bullion will protect your assets
- Owning shares in the miners will likely result in massive profits

The Evolving Retail Silver Market

Many stackers, particularly silverbugs, want silver to which they have an emotional attachment, and they want coins they can share with others on social media. Of course, they are premium conscious, but thanks to the ease of buying, they also might be a little more quick to make a purchase.

Perhaps, once one's acquainted with the silver market through a Marvel Wolverine silver round, because you think the Wolverine is the most cool thing that ever happened, although it cost you double the price of the melt value of that coin, you might get a little more interested in the silver market in general. And then you might do a little research and discover that silver really has a long history as money and that it is probably a really undervalued asset relative to anything else. It could spillover for people that might buy silver on an emotional basis at first, and then after doing some cursory research and understand the logic behind the value proposition.

People get excited about unique coins on social media. Entire communities center on sharing pictures of stacks (guns included, oftentimes). Through these groups, one can keep an eye on

the retail market for precious metals. Many people make trades over these mediums, which were virtually nonexistent during the last bull run.

For instance, silverbugs love MS70s. Bullion coins graded less than an MS70 do not carry much premium, but there is a high demand for those perfect bullion coins. Pictures of such coins abound on social media. Ten years ago, as gold and silver ran to highs amid the global financial crisis, people who wanted to grade bullion coins were butts of jokes. Why would anyone want graded American Silver Eagles? Nowadays, they're a popular coin—perhaps due to the photogenic nature of a perfect coin and the rise of picture sharing apps like Instagram.

Silver Protects Against Coronavirus In More Ways Than One

Silver is even part of the solution in fighting the global pandemic, in it's colloidal form. It seems that no virus or bacteria can long abide Silver. It is being used in liquid form (suspended silver particles) to sanitize hospital rooms and equipment worldwide, and used in various medications. There are silver-infused bandages that help heal wounds, and silver-infused face masks that help keep medical personnel safe during long shifts. Many have found relief using certain types of colloidal silver in a nebulizer, for breathing treatments.

Don't Just Trust Us, Everyone's Talking About It

Since the global financial crisis and the bull runs in silver and gold to \$50 and \$1920, respectively, social media has taken off. Reddit, Facebook and Twitter were already around, but the tools on FB were not yet to the point where a proliferation of precious metals-minded communities could help transform the precious metals retail market. Reddit was really the place—and even then, it was really only one community.

The online silver community has evolved in the past decade, and silver seems set up in a way in which social media apps can help excite people about silver, because of these active communities and picture sharing apps. It's on Facebook and Twitter, where a new shape of precious metals is coming into view.

A Beginner's Look At The Precious Metals Social Media Community

ON FACEBOOK...

Silverbugs

This is such a happening group, they even minted their own rounds: the Silverbugs Round. Members post photos of the silver they wish to sell, and the others in the group place bids. Auctions generally last 24 hours. In Silverbugs, you might see all sorts of cool things – from unique metal to the colloidal silver making process.

https://www.facebook.com/groups/silverbugs/?ref=br_rs

Goldbugs

The Goldbugs group entails a lot of selling. From gold bars to unique one-off gold rounds, the diversity makes for a fun shopping experience. The members even mix in some news and discussion. When it comes to these groups, you'll want to vet all sellers, and even check with group admins before making a purchase.

There are systems in place in certain transaction-based groups. You can ask for people to vouch for a particular seller. Ultimately, talking things over with the group admin before making a particular decision is smart. Taking responsibility for your own actions here is of the utmost importance, but, over time, you may meet some reliable buyers and sellers with whom you like to do business.

https://www.facebook.com/groups/GoldBugsGroup/?ref=br_rs

Silver & Gold Bullion! And ONLY Bullion! Buy/Sell/Trade

In this group, you can buy, sell, and trade your standard precious metals, such as chips, bars, ingots, and rounds. This group has developed its own lexicon of sorts.

BIN = Buy It Now

BIN OBO Buy it Now / Or Best Offer

DND - Deal No Deal

This vocabulary might help you navigate the precious metals industry online in general. In this group, you'll find rounds, national coins, fractional gold coins, and an overall vibrant community of people interested in gold and silver.

https://www.facebook.com/groups/609533022512282/?ref=br_rs

Silver and Gold Stackers (Discussion Only)

In this forum, people can meet to interact, discuss and share information about coins and bullion. Unlike the commerce-centered groups, Silver and Gold Stackers is a good place to ask questions about coins, the industry, and anything precious metals related.

https://www.facebook.com/groups/sagcas/?ref=br_rs

Buy, Sell, & Trade Silver, Gold, U.S. coins & currency Numismatic Strictly

This group is focused on the buying and selling of all sorts of gold and silver coins. The group hosts auctions of unique coins, such as unique graded coins. The members of this group also do a reasonable job sharing timely news about what's going on in the precious metals industry, and some funny memes to boot.

https://www.facebook.com/groups/1978013245815560/?ref=br_rs

Why Buy Gold? (and Silver!)

Founded in 2009, this group is focused on delivering current news items on precious metals. People use this group to gather and exchange information about protecting wealth, investing, inflation, peak oil, and other economic ideas.

https://www.facebook.com/groups/WhyBuyGold/?ref=br_rs

GOLD AND SILVER COIN DEALERS

This group—IN WHICH EVERYTHING IS WRITTEN IN ALL CAPS – brings coin dealers together to advertise deals and conduct transactions.

https://www.facebook.com/groups/1551354075111054/?ref=br_rs

Gold and Silver Seekers

This group brings together sellers and buyers together to offer one of the most affordable and safest environments on Facebook to buy and sell gold and silver bullion.

https://www.facebook.com/groups/508361179625570/?ref=group_header

Wholesale Precious Metals

This group claims to be the leader in numismatics, bullion, jewelry, and more. It only offers 'Buy It Now' options. Unlike other groups, in Wholesale Precious Metals you might find 1,000 ounce silver bars, as well as gold nuggets. Users in this group always post pictures of their metals with a note containing their name and date to demonstrate

https://www.facebook.com/groups/WholesalePM/?ref=group_header

UK & USA Silver, Gold Bullion & Precious Metals Group (The Gathering)

This group, which is for people all over the world, is for all those who collector's, dealers and enthusiasts of silver, gold and precious metals. This group will be the one for the community, be for all members of the community, bring us all together and more importantly enjoy while doing.

https://www.facebook.com/groups/371161403635503/?ref=br_rs

E-Waste and Precious Metal Refining

This is a cool group for those who want to go beyond buying and selling precious metals. The group is dedicated to knowledge, safety, and awareness regarding e-waste recycling and precious metals refining.

https://www.facebook.com/groups/GeoMetals/?ref=br_rs

Pitbullion

Shop for hand poured and 24k gilded gold and silver products. Scrolling through the photos, you'll find silver skulls, art bars, the occasional photo of a cute dog, and funny memes.

<https://www.facebook.com/pg/PitBullion/posts/>

ON INSTAGRAM...

Headsortalescoinco

This IG account offers heirloom-quality investment grade solid silver statues hand crafted with old world techniques.

<https://www.instagram.com/headsortalescoinco/>

Bigbearcoin

This respected IG account provides often graded coins at fair prices.

<https://www.instagram.com/bigbearcoin/>

Mineralexchange

Buys, sells, and trades precious metals.

<https://www.instagram.com/mineralexchange>

Bcbullion

A faith- based precious metals company that offers bullion and graded coins.

<http://instagram.com/Bcbullion>

Johnsonmattheycanadian

Buys, sells, and trade JM products from Canada.

<https://www.instagram.com/johnsonmattheycanadian>

Bullionexchanges

NYC-based precious metals dealer with a very impressive IG account.

<https://www.instagram.com/bullionexchanges>

Mailmanag1

Cool deals on 10 oz bars, American Silver Eagles, 100 oz Engelhard bars, Morgan Dollars, and more.

<https://www.instagram.com/mailmanag1>

Montez Family

Another account for buying, selling, and trading on IG. Lots of art bars appear on this page, as well as unique rounds and graded bullion.

<https://www.instagram.com/Montezfamily6/>

Silverloaf999

Here you'll find classic loaf bars with an account that is open to trades. The account owner posts really unique bars, many of which appear as if they come from the eighties.

<https://www.instagram.com/silverloaf999>

Bet_on_silver

Trade buyer and seller on IG of unique hand poured silver. The bars are melted and poured in the USA. This group has been set up for all collectors, dealers and enthusiasts of silver, gold and precious metals.

https://www.instagram.com/bet_on_silver

Moos & Wolf Metals

These veterans love to pour. Some of the pours look like ancient finds from a pirate shipwreck.

<https://www.instagram.com/mosswolfmetals>

ON REDDIT...

Silverbugs

The Reddit Silverbugs group was one of the first groups where silver investors gathered online, and to this day it is still online for discussion, buying, selling, and trading.

<https://www.reddit.com/r/silverbugs>

JOIN THE DOLLAR VIGILANTE

At The Dollar Vigilante we have absolutely no illusions about governments and central banks and their inherent tendency to steal, distort markets and cause physical and economic destruction...

Our analysts are world-class experts like Ed Bugos, who offer the best advice on how to protect and grow your current assets. Learn the ins and outs of Precious Metals Investing and Strategy and how to create wealth safely and easily. There's a method to making money with precious metals and we give you all the information you need in our variety of eBooks, newsletters and trade alerts.

Use Cryptocurrency To Beat The Fiat Currency Virus

There are two types of people in the world, people who know to invest in cryptocurrencies now, and people who will invest in it later – because in the very near future cryptocurrency will be the only way you will be able to transact privately.

The Covid PLANdemic is setting the stage for the New World Order, which is global governance and control of your money and how you spend it. Think about it. Ninety-five percent of money exists in the digital sphere already. How many places online have you freely given away your identity, your bank details, your contact details and address?

Do you think your bank, Amazon, Walmart, Microsoft and all the others are keeping your data secret?

They use your computers, smartphones, smart TVs and smart cars to collect and consolidate Gigabytes of data just to create a profile of you, your income, your net worth, your assets, your

habits and preferences. But worse than that, they use these computer experiments called algorithms to find out how your thinking and spending behavior can be manipulated.

Do you want the government and banks and online vendors and police to all know your business? If so, skip the next sections. Well, actually close your screen, because this eBook is not for you.

On the other hand, if you believe that privacy is only second to freedom, read on to find out more about the many opportunities to buy and sell outside of a traditional fiduciary currency.

Monero for Beginners

Yes, we love Monero unapologetically! Why? Because it is the most perfect cryptocurrency!

Now, before we get into crypto, we need you guys and gals to take a step back and realize that crypto was made possible by the [Austrian School of Economics](#). **Literally.** All of the early cypherpunks were highly influenced by the Austrians.

The vast majority of us early Bitcoin/Crypto adopters were previously united under Dr. Ron Paul worldwide!

We call Papa Paul the Grandfather of Cryptocurrency (The Grandpa of Bitcoin)!

Why do we give Papa Paul such a title? Because Ron Paul created the fertile ground for Bitcoin to take root in the minds of young libertarians across the planet. Dr. Paul's teachings on libertarianism and Austrian economics literally set the stage for his followers to be the first Bitcoin/crypto adopters throughout the world.

Cryptocurrency was originally begun as the synthesis between the Austrian School of Economics and the Cypherpunk movement.

As libertarians we are most comfortable with the idea of humanity being completely free in the market! Statists by contrast cannot fathom, and are completely against, a world without government as the ultimate 3rd party violent arbitrator.

Cryptocurrency was created, and is still being created, with the ideas of liberty in mind. Liberty, censorship resistance, and financial freedom for the world guides the work of crypto entrepreneurs and contributors worldwide!

True free market, voluntary cryptocurrencies give us the assurance that the ideas of liberty will remain for the rest of history.

Our team follows in the intellectual legacy of Ron Paul and the great Austrians that came before us. We stand at odds to government violence in all its forms!

We view our TDV community as being the center of the cryptocurrency network worldwide. This is because we are the foremost anarcho-capitalist newsletter on the planet. We value and appreciate each and every one of you!

The gravitational pull of the free market is stronger now more than ever because of [the gift of Satoshi Nakamoto](#). Since Satoshi's gift to the world, crypto innovations continue flooding the free market, non-stop.

The cryptocurrency space is like a "free market black hole" of value that the entire planet is inevitably falling into - there is no stopping us now!

In order to understand why the world is inevitably falling into the *black hole of value* that is cryptocurrency, you must study Austrian economics alongside us. This is the school of economics which guides the best open source cryptocurrency development because it is the economic heritage that delights in humanity being completely free in the market. Keep in mind that this only applies to voluntary free market and open source cryptocurrencies like Bitcoin and Monero. Central bank digital currencies or any other so-called "crypto" where the supply is centrally planned, or one that is based on coercion or violence is not a true cryptocurrency.

It is the study of this human freedom that colors all worthwhile innovation in crypto. It is also the perspective which guides our understanding of what is most profitable in the market. It is this exact science of human action - *praxeology* - which is the foundation of Austrian economics.

The science of human action - praxeology - is at the heart of everything we do here. We highly recommend that you take the time during this pandemic to listen to [Praxgirl's lessons on Youtube](#). This alone will give you an edge as an investor in the crypto market unlike anything else!

If you really want to understand cryptocurrency, you need to understand praxeology!

This process of learning praxeology will allow you to see the world more clearly, and in turn make you a better investor.

Why Monero (XMR)?

Be sure to watch the new [Monero Means Money](#) documentary film!

Monero may seem to be the most difficult to use out of all of the cryptocurrencies. In reality, it is the easiest to use, because it is the most perfect cryptocurrency! It is designed with “out-of-the-box” privacy with your security in mind.

Cryptographic security is what makes “crypto” currency possible. You need strong cryptography & privacy readily available to you by default.

You need your money to work for you as best as possible. The vast majority of cryptocurrencies expect you to work for your privacy. By not being private & fungible by default at the protocol level, other cryptocurrencies force you to go out of your way for merely optional privacy features (which are still far from ideal).

Optional privacy is no privacy at all for us here at TDV. It has been proven that cryptocurrencies with optional privacy are actually the most dangerous. This is because they merely give you the semblance of privacy even after using said optional privacy features. Aside from you - and the

few others that happen to turn on the privacy features - the rest of the entire transparent blockchain is completely open to blockchain surveillance.

Privacy and Security

Optional privacy is no privacy at all

For example, take Bitcoin and all of its forks that run with the same – or similar – base protocol. All of them are susceptible to blockchain analytics. All blockchains based on the original Bitcoin protocol are transparent blockchains.

We always knew that Bitcoin was pseudonymous. In the early days of Bitcoin we believed that Bitcoin's privacy was good enough. Bitcoin was pseudonymous with optional private features at best.

As time went on, blockchain analytics companies like [Elliptic](#) and [Chainalysis](#) became more draconian and massively increased their collection of data and analysis. They continued to integrate their tentacles into various crypto asset service providers, including exchanges, payment processors, and custodial wallets, to the point of unveiling the true real-world identities of cryptocurrency users. This ensured the complete transparency of Bitcoin protocol based blockchains, and eroded the privacy of their users.

Note that there is no such thing as perfect privacy. There is also no such thing as perfect transparency. Privacy is not an off and on switch. You have to constantly improve it. Monero is by far the most private cryptocurrency, with a network of worldwide contributors completely committed in ensuring evermore robust privacy as time goes on.

Monero is private right now for the present moment. No one knows with exact certainty what the future holds. Treat Monero with respect. It could still have vulnerabilities to be exposed in the future. Monero contributors are constantly stress testing its design to make sure that it is as secure as possible.

Perfect financial privacy is the absolute certainty of having information regarding your financial holdings and transactions completely inaccessible to anyone except yourself, or anyone to whom you choose to reveal the information. Perfect transparency is for this information to be completely accessible to anyone anywhere.

Perfect privacy will never exist.

Monero is the most private cryptocurrency in existence today. Other cryptocurrencies such as Zcash (ZEC) fail at privacy for not having it enforced by default at the protocol level. These optional privacy features merely give you a false semblance of privacy.

Optionally private cryptocurrencies are very dangerous in our opinion. We actually consider completely transparent cryptocurrencies to be more secure than those with optional privacy settings. This is because with a surveillance coin you know for sure what you are getting yourself into. With an optionally private cryptocurrency, you may think you are private when you are not!

I want Monero!!!

I want Monero. How do I get it?

Relax... Breathe... Take it easy...

As paradoxical as it might sound, it is our observation that Monero is actually the easiest cryptocurrency to use because of its default privacy features. You do not have to do anything special for Monero to be secure for you to use.

Here is a rundown of our recommendations for operational security and applied cryptography:

- Consider getting yourself a [Purism](#) computer. They are Linux based, with the [Intel Management Engine](#) disabled so that your hardware does not have any backdoors.
- Use the [Brave browser](#). Brave is the only one that has its privacy settings ready to go. We also like [Firefox](#), [Iridium](#), and [Chromium](#). In Chromium, Iridium, and Firefox you have to [enable and configure privacy settings](#). With Brave you are ready to go!
- Use a VPN. We recommend [Mullvad VPN](#) because it is easy to use and because you can purchase it anonymously; a randomly generated number is used for your account number and login for Mullvad. You never have to give the company any personal information.
- Use [Tutanota](#) or [Protonmail](#) for encrypted email.

Where to get Monero (XMR)?

- If you already own any other cryptocurrency, like BTC, you can convert your crypto for XMR at [Morphotoken](#), [Sideshift](#), or [Godex](#). Remember to have your VPN turned to a non-US IP address on for maximum security!
- If you don't have other crypto to trade for XMR, you can use [Coinbase](#) to buy BTC and then transfer the BTC to [Kraken](#) and buy XMR there. Once you have BTC, you can also exchange it at one of the exchanges mentioned in the above bullet point. Here is [Coinbase's trading tutorial](#). Here is [Kraken's trading tutorial](#).
- If you want to purchase your XMR anonymously - person to person (P2P) - we recommend that you look into [LocalMonero](#). We recommend extreme caution, especially with any in-person crypto cash trades with strangers. There are many examples of people being [set up by government agents](#), or being [targeted by thieves, scammers, & kidnappers](#), so be very careful, especially with large amounts! Only perform P2P trades (especially large ones) with individuals you highly trust, and be aware of the laws in your jurisdiction to avoid getting arrested. If you really want to buy XMR anonymously using LocalMonero, we would refer you to [LocalMonero's tutorials and explanations](#). Be safe trading P2P!

Best Wallet to Store Your Monero (XMR)

If you are brand new to crypto, we recommend that you use the [Exodus wallet](#). In our opinion, it is by far the most versatile and user-friendly multi-coin wallet in the market. Exodus is also a great [Monero wallet](#).

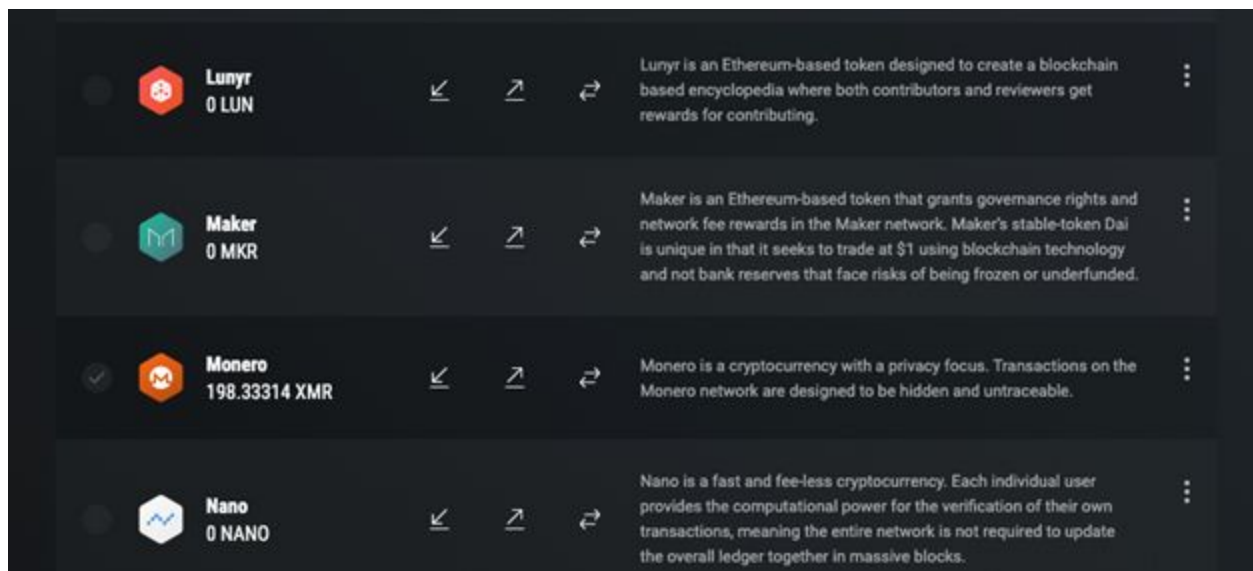

Setting up a Monero Wallet

Exodus recently created a [tutorial video](#) which explains the process of setting up a Monero wallet.

When you first open up your Exodus wallet, you may have to go all the way down your coin list and click the button that reads "add more."

Once you click the “Add More” button you will be taken to a screen where you can turn on Monero (XMR) on your Exodus wallet. Once you do that, your Monero wallet on Exodus is ready to go!

Once you send funds to your Exodus wallet, you will be prompted to back up your wallet. Write down and save your 12 word recovery phrase. Your 12 word recovery phrase is your wallet backup. You can recreate your Exodus wallet from any computer in the world using your 12 word recovery phrase.

Once you have your 12 word recovery phrase safe, consider keeping it safer in a fire resistant metal plate. We currently recommend [Coldbit](#), [SteelWallet](#), [Crypto Key Stack](#) and [Blockplate](#).

After doing this, you can step up your security by getting yourself a [Trezor hardware wallet](#). Hardware wallets allow you to keep your private keys in a secure hardware device. [Trezor and Exodus have a partnership](#) that allows both of them to work well together.

It is very important to ensure that your hardware wallet is **only purchased directly from the manufacturer**, and has not been tampered with in any way, and that the wallet seed is uniquely generated after a factory reset.

Bitcoin is not going Anywhere! Using Bitcoin Off the Grid Without Internet

Sending Bitcoin via Ham Radio

Disclaimer: Please be sure to check your local laws to avoid being kidnapped or fined by the FCC or other regulators/bureauRATs. Some jurisdictions may not permit the transmission of certain frequencies or power levels.

Kryptoradio, circa 2014: <http://kryptoradio.koodilehto.fi>

Alternative blockchain transports are critical to the success and survivability of the Bitcoin system

Bitcoin core developer Greg Maxwell

Cryptographer Nick Szabo laid out for us the future of sending Bitcoin via Ham Radio [in this classic presentation](#). Bitcoin.com broke [down Szabo's presentation for us](#).

So as for the age-old question within crypto, “what would happen to Bitcoin/crypto if the governments shut the Internet down?”, the market already has an answer. Yes, we can send Bitcoin via High Frequency (HF) Radio.

In our last issue, we broke down how [Bitcoin \(BTC\) can be sent via the use of satellites](#) combined with GoTenna radio mesh networks, while avoiding the use of the Internet's infrastructure.

In order to understand how sending BTC via HF Radio works, you must first understand that this is just another method of communication using a different radio frequency than most technologies today. HF radio uses short wave frequencies for radio transmissions (1.6 - 30 MHz).

The range of these frequencies can travel extremely long distances. A very similar technology was used by US armed forces back in the day to [communicate with ships out in the Pacific](#). The Navy used 500 kW for its transmission of VLF (very low frequency long wave signals). This is not necessary for sending BTC. [It has already been proven effective to use low power for the sending of BTC; 5 kW or less of energy is enough for the task. A power level of 5 kW or less keeps your BTC transmissions in low profile.](#)

One of the advantages of HF Radio communication is its longer broadcast range. This is actually good, because it lessens the need of risking the possible man-in-the-middle attack or sybil attack risks seen in mesh relays. For example, think of the mesh relay that happens when [you use bluetooth for creating a mesh network](#). The longer the range of possible transmission - as provided for by radio - the less hops you would need to take to get to your destination. In comparison to HF Radio, the range of bluetooth is very short, resulting in the need for a lot more bluetooth nodes to reach long distances.

Radio waves also provide us with censorship resistance by design. For example, the Chinese firewall cannot stop HF Radio transmissions. During the Cold War, the [Soviet Union controlled over 1000 broadcasting stations in an attempt to jam American radio broadcasts](#). We believe HF Radio is still a largely unexplored world of connectivity for all of crypto!

Without Internet infrastructure, the Bitcoin protocol's connection via HF radio could be the main source of connection between Bitcoin miner nodes. This means that Bitcoin miners could be connecting strictly as [Simplified Payment Verification \(SPV\) nodes](#). [Here](#) is an interesting discussion that juxtaposes the use of BSV SPV nodes vs relying on popular middleware that connects miners to one another as commonly experienced on the internet.

Some bitcoiners argue that the Bitcoin protocol was supposed to connect between miner nodes without any intermediaries. Nodes connecting via HF Radio waves would strictly force miners to connect via SPV.

The use of HF Radio to connect not only Bitcoin, but all other crypto protocols, could be very useful in helping us create a more robust system of censorship resistance. This is definitely an area that we will be experimenting a lot with in the near future.

If you really want to dive into the world of Ham Radio, we recommend that you get acquainted with [PSKmail](#). PSKmail is a set of mail servers being operated all around the world.

PSKmail servers are connected to radio receivers. Anyone can set up a mail client and broadcast email messages over radio. That is, if you are out in the middle of nowhere - or in the middle of the ocean - your mail client can send an email message over HF Radio. If your message is received by one of these PSKmail servers they will relay it to regular email.

As far as we know, there is no real reason to believe the Internet will be shut down. As long as we communicate with encryption, we should be able to overcome any attempts at censorship. Nevertheless, this does not mean that we should grow complacent.

It is our opinion that it is important that we not only become familiar, but also become competent with using Ham Radio for sending crypto. We recommend that you join the [Doomsday Radio group on Telegram](#) to learn more about this fascinating technology. *(Please note that this is an external Telegram group not run by us).*

This is the time for you to learn from the communities of [preppers online!](#)

We also recommend that you start by learning [the basics of Ham Radio](#). Start by getting acquainted with [the myriad of resources available online](#). [The National Association for Amateur Radio](#) is a good place to get started. If you really want to get into it, [find a club near your area](#). You'd be surprised to find most people involved in this world are libertarian just like you!

Given the possibility of a cypherpunk dystopia, we must arm ourselves with this knowledge to overcome any possible future persecutions.

Sending Bitcoin via Satellites

In this time of crisis and uncertainty surrounding COVID-19, there have been rumors that TPTSB might be planning to shut down the Internet. At this point, we don't think that would be in their best interest, and we don't expect them to take things quite that far. Nevertheless, it is important to be prepared just in case it happens. Even if the TPTSB somehow shut down the Internet in your area, keep in mind that the use of BTC is possible even without the Internet, including the public broadcast of small files via satellite.

Completely offline Bitcoin (BTC) transactions using a GoTenna mesh network and Blockstream's satellite network

Thankfully the strong entrepreneurial community surrounding Bitcoin (BTC) has some genius hackers and engineers who have been working hard to build complex systems that will help those in repressive regimes and otherwise lack Internet access.

Blockstream has been at the forefront of innovation in this area. Although they have received some criticism, they have also done much good in helping to increase BTC's censorship resistance. Their stated [mission](#) is the following:

Blockstream's mission is to create the financial infrastructure of the future. We build crypto-financial infrastructure based on Bitcoin, the most robust and secure blockchain. Applying cutting-edge cryptography and security engineering, we're building the technology that makes financial markets more efficient by reducing reliance on trust. With a long-term outlook on delivering robust and scalable solutions, we invest heavily in research and development to strengthen the Bitcoin ecosystem and protocol. Peer-to-peer, open-network finance holds the promise to change the world for the benefit of all. Blockstream is proud to be making this a reality.

In pursuit of this mission, the [Blockstream Satellite](#) service leases third-party bandwidth on [commercial geosynchronous satellites](#) to transmit and receive Bitcoin data around the globe so that users are able to connect and trustlessly verify Bitcoin blocks and transaction data. This enables these users to receive BTC with cheap hardware.

Blockstream's satellite network not only helps people who live in areas with Internet censorship, but can also help those in remote areas who lack the network infrastructure required for Internet access itself.

According to their website, there are currently [five satellites](#) (orbiting at an altitude of 22,236 miles) serving the following regions: North America, South America, Africa, Europe, and Asia. Blockstream's satellite network forms a "ring" around the planet, guaranteeing that people can access the network's coverage all around the world.

Blockstream even has a [Dish Alignment Tool](#) that helps you point your satellite dish in the right direction to connect to the satellite. You can view the live satellite transmission queue [here](#).

Blockstream engineer [Grubles](#) is known for his work in developing solutions for broadcasting Bitcoin network data via satellite. Messages to the satellites can be broadcast via a local mesh network of GoTenna hardware devices using TxTenna software, which have a range of 4 miles between hops, depending on the local geography and "density" (buildings, trees, etc.).

According to an [article](#) by Bitcoin Magazine, "*Grubles offered two satellite use cases that he regards as 'killer apps.'* 'Using the Satellite API to broadcast messages to everyone in the coverage area and, of course, the ability to keep a Bitcoin node in sync,' he said."

Grubles has written multiple tutorials ([1](#), [2](#), [3](#), [4](#)) with technical instructions explaining how to build your own Bitcoin satellite node using cheap hardware and connect it to the network. The Blockstream Satellite [Github page](#) includes even more technical details.

Recently, Bitcoin Core developer [Adam Back](#) doubled down with further [instructions on how to send Bitcoin via satellites](#).

Even if the Internet were to temporarily go down, both Bitcoin and Monero are here to stay. If/when it were to come back online, things would just resume where they left off.

Bitcoin (BTC) is resilient, and people are already using these satellites.

Learn How To Bulletproof Your Shares

Investors and citizens have been lied to by the financial community with regard to the actual true health of financial organizations for a long time now. The Coronavirus has brought the fragility of the world's "true and steadfast" financial institutions center stage, with Western countries now entering communal bankruptcy.

Let's also remind ourselves that the Securities Investor Protection Corporation (SIPC) is backstopped by the U.S. government—so if the SIPC is tapped out, and the U.S. government goes bankrupt like many outspoken and successful investors are predicting, you will not be getting an insurance check from the SIPC.

The reality today is that owning traditional assets in traditional ways is the best way to get wiped out. Why? Because you don't really own them unless you register them in your own name!

The single most valuable thing you might ever learn is how to de-risk your share ownership from the financial system. The traditional method of owning stock investments, which the majority of investors use today, puts the individual investor at the greatest risk, while offering the greatest upside to the broker-dealer. This traditional method of opening a stock account, purchasing shares, and allowing your broker to hold them for you is called, "street name registration." It is the riskiest of all methods and allows your broker to lend your shares to short sellers, thereby

driving down the price of your own stocks. Additionally, this method allows your broker to “re-hypothecate” your assets – meaning it allows your broker to borrow money against your shares and speculate in the derivatives market!

These hidden risks are planting the seeds of tomorrow’s ultimate collapse – In which there may be a system-wide collapse of broker dealers, taking down tens of thousands of investors, and ensuring permanent non-recoverable losses to an entire generation of investors.

“Several million private accounts may vanish – Brokerage accounts, Pension funds, Mutual funds, they’re all at risk. We are getting into the middle stages of implosion, podium where I believe the public will not wake up until at least one million private accounts are stolen, and completely vanish.”

-Jim Willie, The Hat Trick Letter, GoldenJackass.com

The Two Methods Of Owning Stocks Your Broker-Dealer Will Never Tell You About!

There are two methods of owning stocks that completely remove the broker dealer counterparty risk attached to your shares – effectively removing them from “the system.”

Method #1: Direct Registration

This is a method of share ownership in which the shares are held digitally in your name on the books of the transfer agent. These shares are outside of the trading market system, and out of reach of your broker dealer. Ownership is safeguarded against fraud by the SEC’s requirement that your signature is needed at all times before any transfer of ownership can take place. The broker dealer is completely cut out of the ownership equation, which means, among others, that:

- You have zero broker dealer, clearinghouse, and market counterparty risk
- Shares cannot be lent out by a broker and “shorted”
- Shares cannot be used by the broker for collateral or “hypothecation”.

Method #2: Obtaining Physical Paper Certificates

Before there was email, and servers, share certificates were one of the only ways a person could prove they owned shares in a company. Many people (although in their 70s-80s now) prefer paper shares as they don’t trust the electronic share ownership methods.

Method #2 entails working with your transfer agent to have the physical paper shares sent to you for safekeeping. Again, this method of ownership completely cuts out broker dealers and transfer agent risk from the ownership equation. This form of share ownership provides you with ultimate control over your shares, and arguably the lowest level of risk among the three ownership methods, because:

- You have physical possession at all times
- Shares cannot be seized or confiscated digitally
- Shares cannot be lent out by a broker and “shorted”.

Next Chapter: How can you safely invest in gold and silver mining shares and avoid the collapse brought on by The Coming Broker Dealer Crisis?

JOIN THE DOLLAR VIGILANTE

To learn more about these methods, how to apply them, and the pros, cons and risks, [subscribe](#) for access to our eBook, *“BulletProof Shares” – How To Protect Your Stocks From Broker Bankruptcy & Theft*. Your broker dealer will never willingly tell you about these methods—because they make more money when your shares are in their hands—precisely where risks are greatest to you.

There will be more opportunity in this crisis than in any other in the past century. In order to profit from the coming crisis you need to ensure that if/when your brokerage goes bankrupt you still retain ownership of your shares. With the methods discussed in *“BulletProof Shares”*, you will be 100% safe if the entire broker-dealer industry collapses—your stocks will be 100% safe.

Become An Emancipated Human And Live Your Best Life

We live in extreme times. Closed borders, surveillance, nationalization... All of this was a nightmare in the free world, but now it has become a new norm.

A few months ago, you wouldn't have believed it is possible for the government to wholly remove your rights to movement, work, privacy, trade, assembly... The Covid plandemic has made it clear that our once inalienable, fundamental "rights" are now mere privileges to be taken away on a government bureaucrat's say-so.

To avoid the legal obligations which accompany residency, such as income and asset taxes, social security contributions and forced military service, you need a coherent plan for a stress-free, healthy and prosperous life without government interference, taxes or coercion.

Making a life outside your borders is not only a possibility, it might become imperative.

Luis Mises is an Emancipated Human who shares the stories of people who have awakened to the truth about the police states they live in, inspiring others to live a freer life.

Here is one of those stories...

LUIS: I hear a rooster in the background. I haven't heard that since I visited Mexico in some of the ranches. Thank you for being with us today and I am really excited about this. I want to share with the Dollar Vigilante subscribers all the things that you're doing. Thank you for this opportunity.

MATTHIAS: You're very welcome.

LUIS: Tell me, where you originally from? And how in the name of the Lord did you end up in the Philippines?

MATTHIAS: That is an interesting story. For everyone in the Dollar Vigilante community. I am originally from Berlin, Germany. I'm in my early 30s now and I ended up here in the Philippines because of Oliver Janich. He is actually one of the most famous libertarian book authors and journalists in Germany. He has more than 100,000 followers on YouTube and he's actually the guy who created this here.

I have to say it's a little bit more complicated now because we split up into more communities now. Oliver was recently why we all came here. He started the project in the Philippines. There is actually also another German guy living here, also libertarian and he was approached by Oliver 2015. We all knew what was coming up and Oliver was already planning to start a community out of Europe. A safe place where the new world order is not so apparent yet, like in Germany. Germany is a hellhole now. It's crazy what's happening there.

Which is really sad because I really liked it there. Especially Berlin had a great time there. Things got worse and worse. I'm sure you heard about the so-called refugee crisis where they are flooding the country with refugees that are... Immigration is not a bad thing if it's an organic immigration. People only come here to enter the welfare state. It's also a big cultural clash between mostly Christians in Germany and the refugees coming in. We have a huge amount of rape and crime and they've increased dramatically in the last three years. Really, really scary!

The German public is completely brainwashed because of this holocaust thing and they feel pretty guilty about anything and they feel like they have to help all the poor refugees. This is why the government can do anything they want in Germany. It's really, really scary. First Oliver initiated this mainly because of the coming economic collapse. And it's getting worse now. And now in addition, the refugee crisis came on so I am really happy to be out of Germany and to be here now in a very peaceful environment. The government is quite small so the Philippines has low-reach government low taxes. Life is pretty simple here. Really uncomplicated.

LUIS: So, if I hear you're right, you were in Germany and some of your friends and you notice things that were getting pretty bad he said well let's get out of here. So you moved there and started creating an organic intentional community and a lot of you are living in a bunch of smaller islands and you guys decided to move to the Philippines in Romblon.

MATTHIAS: Yes, all of this came to happen because of this one German that was already living here and following from here he approached Oliver because Oliver has a lot of followers already. He came to Oliver and said to him hey I heard that you want to start a project outside of Europe for people that want to escape the upcoming economic collapse. Maybe you want to come over and look at her place here? The German guy already had a lot of land here. That's how everything started. Oliver came here and was the first one building his house and he started to advertise the place. This is how we all, step-by-step, came here. Right now there are about 20 people living here but not all at the same place. For instance, me and a friend of mine started our own community now. Because the way the first project was going on was not exactly how we imagined.

They're helping more like a hotel where people can live here and apartments and they are old by libertarians. And people can come here when the collapse happens. I don't know what planet is really in my opinion they should already be here. In the meantime they are renting out the places to tourists which is also a nice income here. And we're making our own thing now. It's all along the same lines and in the same village. We're really close to each other.

LUIS: That is great. You are mentioning Germany. I saw some videos of a lot of violence happening. Gangs of people pulling ladies hairs and smacking them in raping them. Is all that real?

MATTHIAS: Yes. And it's even, what you hear the media is just a tiny little bit. So it's crazy how crime rates increased in Germany. It's no joke. I don't want to sound racist, however, the people that come to Germany don't come because they want to work or because they share our values or beliefs. They come with really different mindsets and for them life is not the same. We have a lot of group rape crimes and we have never had that kind of crime in Germany. They are raping girls in groups and then slaughter them afterwards almost a daily basis now. The media is really not reporting about it. The foreign media in other countries around Germany, if you follow the Eastern European media, they are more open about it, they don't do it.

Even if policemen are coming out speaking out because they are not allowed to say or have certain beliefs. They have orders to treat them in a special way. A lot of these people have never seen a supermarket before and they can just pick things, take them in their pockets and go outside and if they catch a German doing that they would immediately file a case against them but when it is a refugee they are treated differently. They just don't do that and let them go.

It's a completely different treatment to them and it's crazy and not fear. I did not feel safe anymore in Germany and a lot of people feel that way but in Germany if you speak out even to other Germans you were immediately called a Nazi and erased and this is how Germans react to that. They're completely brainwashed and it is a nightmare.

LUIS: I can see it in your face, mature in sadness and anger. I can see it. To have your home country be taken away in a non-organic way. We are all for organic movement of people but this seems planted. Just to create havoc. It seems like they're poking the bear to get something like this.

MATTHIAS:

Absolutely. A lot of NGOs are financed by Soros and company. They are financing the shapes that bring the refugees over the Mediterranean Sea, to Italy and Greece. Italy, for instance, they always come in waves. They have a lot of refugees

now on the beaches, the coast. They don't know what to do with them and they let him pass to Germany because Germany will take them all. And most of them want to come to Germany because we are a wealthy country with a lot of welfare. A lot of them can get €1000 a month.

You have to think about that. Our own retired people who are also living on a pension from the state are getting very little. There are a lot of old people collecting bottles to sell and be able to survive whereas we get a lot of refugees getting €1000 and they get an apartment. First they are putting these camps and we have villages in Germany with only a few hundred people and then they build a refugee camp where they put another few hundred migrants into that place. You can imagine if he doubled the amount of inhabitants and half of them are foreign people there is a huge clash of cultures. It's really changing Germany. Germany used to be a great country despite the becoming we have always had. It was a safe place and we have amazing infrastructure but things are rapidly changing.

When I took the Filipinos and asked me why you hear? They're curious. And then I tell them about what's happening here in the Philippines the media doesn't report a lot about Europe. The Philippines is closer to the US. They don't know about all of this and they are shocked about

how her country is changing rapidly and being flooded by refugees. They cannot believe it and they are shocked. It's weird what's happening.

LUIS: One of the things that I find very interesting is, after World War II, Germany had to pay for everything. All the damages for themselves and the others. Not only did they do that and they came up on top and created amazing infrastructure they bailed out degrees they became the richest country in Europe. They went from being in the home to being all the way to the top because of their work ethic and the strength of the German people. I'm feeling chills when I talk about this. The whole idea of being such a powerful element now being played by the puppets of the state. It is criminal. So you go to the Philippines and you say, let's start over. When you mentioned that you were creating hotels or airBnB and places to rent, what is the final vision that you guys have on this project?

MATTHIAS: The one place where all of her stays, the piece should change a little bit. This was a little bit disappointing to us that it seems like they are more like creating a hotel and the initial vision was to come here and to be self sustainable. To be independent and with the growing food or water. To get through these hard years are about to come. The crisis is kicking in. This is what we have been waiting for for years already. Our position in the place where I'm working, it's creating separate houses so we'll own houses and we create our own materials. We create our own clay bricks here. Fireproof houses. We create our own materials and we bought professional drilling machines so we have a deep well over 100 m deep. The deepest whole island.

We started to buy chickens and pigs and turkeys. We have areas where we have only animals, it's pretty cool. Between these houses, the whole land is 1.5ha and it's still growing. We have fruit trees and we grow vegetables. Everything grows superfast here, the tropics and super easy. It's also really beautiful to watch. We are really busy doing that over the past 3 to 4 months now. It is still ongoing. We are still in the early stages in this particular place. Oliver's place is almost finished. It's also a nice place but it's more like a touristy spot. As I mentioned, Oliver Hassler followers and they come here to visit. We have deep talks with all of these things happening worldwide.

We are all libertarians basically and most of them are true thirsts also. It's really nice having this place where people come together all with the same mindset of having these nice conversations. The division, our vision is to be self sustainable for the coming years. I have no clue how hard the Philippines will get hit during the financial collapse. I know that the West will be really bad probably. In the Philippines, since this is not every developed country, most of the economy is

agrarian and the people who live here, everybody has her own garden, everybody grows her own stuff and they have chickens. I feel pretty safe here even if the supply chains will shut down for some time. We have a really great place where we can easily survive.

LUIS: For the people reading this interview and they think it's awesome and they want to contribute and be part of it. Are you still collecting partners or how does that work?

MATTHIAS: We were thinking about that actually because this interview came. Where so well connected already. We have a great team and we're connected with the locals and the local government. These are really nice people. If somebody is interested they can reach out to us. Because of the experiences that we made in the first project, we learned that it's good if the people get to know each other first if there is a fit. Anybody can come here at any time and if they say hey this is great, I like what you do and I would like to be part of it, they are welcome to contribute. We can find a place for them. We have all the connections also to get land because a lot of foreigners are getting scammed here especially by other foreigners. We are very well-established here so we can easily help people to get their own land which is really safe.

LUIS: Let me ask you a little bit about prices because that's kind of important. Would it be millions of dollars? What is something reasonable land wise? And my other question is can a US foreigner acquire land there?

MATTHIAS: Second question. No not really. You can only lease land. It's the same in the entire Southeast Asian that they just changed the law really recently and when you create a company here the company can be owned 1% by foreigners. And that was not the case before. Now you can create a company here 100% run by yourself and the company itself can own land. The foreigners not yet only lease. But this may change in the years to come as well. If you create a leasing contract he signed in a way where you can convert a sale in the future. So you can release the land here next 50 years and then you would have to renew it. Which is also no problem but in the future we are pretty sure that after the fixed 50 years and we can see the tendencies with the company being read recently it may happen. There is a workaround as you are on your land. We believe that in the future private persons will be allowed to own land here. Of course there are other ways to do that. If you come here a lot of foreigners marry a Filipino and that makes life very easy. You can stay here and own land.

LUIS: As far as the prices... If somebody wanted to be interested in what you are doing, what would that look like?

MATTHIAS: I can tell you the prices that we paid. If they said I have no clue how to build houses maybe you can build it for us? We can negotiate. We're not doing it to make a ton of money, we are making because our vision is to create a place with like-minded people. That's our main thing. It's very, very cheap to buy land to build houses here. Especially if you use our materials which we create here even cheaper. Stronger to build houses then the local way which is usually just concrete. A lot of the locals here just live in bamboo houses. You can build a bamboo house which you can make really nice. You can live really cheap. Perhaps for \$5000 you can build 60 m² house with bamboo. The price for the land here, for plots we paid hundred and 40 pesos which is \$2.50 per square meter. It's really cheap. Of course this is not beachfront and we're not talking about beachfront property period for that you get around 3000 pesos which is around \$60 dollars.

LUIS: It doesn't matter if it's not beachfront property. You can bike to the beach in what? 15 minutes?

MATTHIAS: Exactly. if you go on a scooter, no one is there and is completely empty. We have very very low tourism and the beaches are stunning. We have so many of them and you can write for five or 10 minutes and you are on a lonely beach. I don't need a house on the beach. I value the things and I rather have a nice garden with my own fruit trees. It's really a beautiful island and if you buy more land in a part of the island in land it's really cheap. \$2-\$3 per square meter.

LUIS: How safe is it in there?

MATTHIAS: In terms of crime or what? To be honest there is no real crime here on the island. Seriously we're always hanging out with the local police in one beach because there is a bar that is owned by some Germans also. They have been here for 12 years. It's the only place where you can get draft beer and people like it. Especially the Germans. The local police are always there doing the karaoke. Filipinos love karaoke. And you have to deal with that even if they cannot sing. They're very open and very friendly. All of these are really nice people. I have traveled a lot in my life already and I have never stayed one place for so long as I have here that the locals here are really nice. As we were starting a project, all the neighbors... We start creating a lot of jobs which is a good thing. All the neighbors and the locals bring this food and feed us things. They do that. It's so nice and friendly and we always have kids running around helping us it's really cool. The schools are totally different from what we know in the West. Where the teacher is in front and they tell us what to do all the time. Here the teacher sits in the corner and indicates they have questions they can go and they can learn and have freedom about things they can learn they can do math and science. More like Montessori style. It's not as strict like I know from Germany. School is really strict in Germany and that was just my experience. Regarding the crime rates, it's really low. Sometimes when somebody gets drunk there might be some fighting that you have that everywhere. It's not like there are games going around breaking into your house. We have never heard of anything like that.

LUIS: It sounds quite divine actually. If you had to do this over again, what would you wish you had known from the beginning?

MATTHIAS: That things are not as organized as in Germany. You cannot rely on anything here on time. If people want to come here they need to know the things move a little bit slower here period. Filipinos say that there can come at it etc. why time but they always show up an hour later. When we ordered material from the hardware store they said they would deliver tomorrow they came two days later. These are things you need to know and if I knew that in advance I would save some money because you

need to organize well you have a team of workers and you need to pay them. Many materials. This is very different from Germany. You cannot rely on timing very well but once you know that you can adjust and deal with it.

LUIS: Thank you, I really appreciate your time and you are awesome and I really love this interview.

JOIN THE DOLLAR VIGILANTE

For expert advice from Luis Mises and other community members around the world on how to reduce or eliminate your taxes legally, safely – without a tyranny state looking over your shoulder. You can open an entire world of profit, living and tax saving opportunities by joining [becoming part of our community](#) and escape the Covid state capture by taking back the control of your life, your freedom and your money! We'll tell you how to live anywhere in the world you want, pay low (or even zero!) taxes legally, and have a backup plan.

Hedge Your Survival In A World Without Food

Have you ever thought about the possible scenarios in which you'd be forced to produce your own food? Here are a few:

- Unemployment (loss of job, underemployment)
- Hyperinflation (cost of goods skyrocket out of control)
- Economic Downturn (collapse, recession, depression)
- Crop Failure (flooding, drought, frost, pests)
- Transportation Crisis (trucker strike, fuel costs, regulation)
- Long Term Grid Down (electromagnetic pulse, solar flare, cyber attack)
- Supply Shortage (war, increased demand, embargo)

Unless you are already living in your basement and completely cut off from society and news on what's happening "out there", you will know the sky has fallen – and it's time to start your survival garden.

Globally, people are dying – and it's not because of a viral infection. Countries which already struggled with famine are now pushed over the edge and even in the USA, food shortages are starting to show in the empty shelves and freezers of supermarkets.

Is this part of the great plan? Can human beings really *intentionally cause* starvation and the destruction of millions of farm animals, dairy plants and fresh produce? And what can you do about it?

First, unless you're self-sufficient, let's remember how food gets to your table: If there are no farm laborers to milk the cows and feed the pigs and collect the eggs, none of it's going to the food processing and packaging plants. (Even if *there* were workers, which there aren't, because they're not essential) Follow the chain further to distribution: trucks, ships and airplanes are grounded – disrupting deliveries of fresh food. And while some food retailers are open, farmers' increasing struggle to shift supplies from restaurants to grocery stores, will soon create shortages for consumers.

Supermarket chains as well as federal regulators claim the U.S. has ample amounts of products in cold storage to handle the unexpected demand for food and household products from Americans. Tell that to the farmers who have been forced to slaughter millions of livestock and throw out their produce – simply because logistically it is impossible for them to get their goods to the market. Another group who may disagree with the FED are 12 of the major US meat markets whose plants are currently shut down! For the first time in history. Ever.

Analysts are saying global supplies of the most widely consumed food crops are adequate and that wheat production is projected to be at record levels in the year ahead. Yet some of the world's biggest exporters of wheat, like Romania, are forbidden to export its crops.

Longer-term, lack of labour is affecting planting and harvesting and could cause shortages and rising prices for staple crops in a throwback to the food crises that shook developing nations a decade ago. And more importantly, even if there is food available, hyperinflation is going to make it simply unaffordable for all but the super wealthy.

Already, five months into the "virus crisis", the price of wholesale beef prices reached an all-time high of \$410.05 per 100 pounds – almost doubling in a month. Other food prices are also guaranteed to skyrocket, so manifest your inner doomsday prepper and start making sure you'll be self-reliant when the food supply chain breaks down forever.

Best Strategies For Growing Your Survival Garden

- Failure is not an option. When your survival depends on your success in the garden, you can't risk it on untried theories or inexperience.
- Limited Time – Just because life is collapsing around you doesn't mean that you will suddenly have all of the time that you need to spend babysitting your plants. You need a method that provides the maximum return with the least amount of input.
- Limited Water – It is possible that you may not have irrigation or city water to keep your plants hydrated. Plan low water growing methods.
- Limited Resources – There may not be gasoline available to power a rototiller or you may not have fertilizers or pesticides. You may not be able to purchase valuable tools. Plan in advance to have what you need or develop techniques to produce food naturally.
- Growing Season – You need to eat every day of the year, yet depending where you live, you may only be able to realistically produce a crop for a few months. You will need to learn how to extend the growing season and preserve the harvest.
- Protection – Your garden bounty may be at risk from others who are also having difficulties or critters who want to devour your work. Be prepared to share, but also be prepared to protect or disguise your goods.

What Type of Survival Garden Fits Your Family's Needs?

Calorie Intensive Garden – Calories are critical for energy and bodily functions. Grow potatoes, avocados (if the climate is right), nuts, dried beans, green beans, sweet potatoes, sunflower seeds, peas, corn, carrots, and beets to meet your basic nutritional requirements such as protein, fat, vitamins, minerals, and calories.

Chicken Fodder Garden – grow swiss chard, kale, fodder beets, and beet greens specifically for chickens, which can provide you with fresh eggs full of calories, protein, and fats.

Supplemental Nutrient Garden – This garden is designed to supplement long term food storage (wheat, rice, beans, oats, pasta, potato flakes, etc.) with fresh ingredients that will provide missing vitamins such as Vitamin A and Vitamin C.

Emotional Boost Garden – choose leafy greens, herbs, tomatoes, peppers, cucumbers, onions, berries, fruits and family favorites to give taste, increase nutrition and provide emotional satisfaction in long term basic staples and freeze-dried meals.

And capitalize on the Corona Craze by finding out exactly what it will take to make major investment wins in 2020 and beyond. We have [tons of information and resources available](#) for our members, including a variety of eBooks with some the top financial freedom advice available in the world, as well as communities of people who who are eager to help you survive the orchestrated “system collapse” over the next months and years when:

- banks will close
- money will be worthless
- stocks will be a mess
- will lose most of their mutual funds
- Exchange Traded Funds (ETFs) will be gone.

Immunize Your Money, Mind And Body

We've been blasted with the millions of positive coronavirus cases. In fact, it is the sheer number of "cases" which repeatedly come up in most people's defence against their common sense telling them something is very very wrong.

Here's why so many people test positive

Covid-19 is merely a strain of the Coronavirus that was "discovered / manufactured" in 2019. And because the test kits are picking up traces of Coronavirus – which means that if you have recently had the flu, or even a common old cold, all of which can be coronaviruses, you will test positive. You won't get sick; you won't even be contagious.

We've been told that a vaccine is being developed to "protect you against Covid-19". In fact, this forced vaccine/nanochip to remotely identify and control you and your children's every move. And if you don't have it – in the words of Bill Gates: "public gatherings will not come back "at all" until we have mass vaccination."

Don't get the vaccine – lose your freedom. Get the vaccine – lose your freedom. But one thing is certain, once you give up rights to your body, the government owns you.

What can you do?

"Man does not live by soap alone; and hygiene, or even health, is not much good unless you can take a healthy view of it or, better still, feel a healthy indifference to it." – Gilbert K Chesterton

There are many ways (besides washing your hands) to avoid any flus, colds or other health issues, simply by building your natural immunity. Your immune system's job is to protect you from infections and illnesses. Your immune system is the one that helps you recover if you get sick. Having a strong immune system is critical to protect your body against viral infections.

Change Your Diet

Eating a nutrient-dense diet is one of the best and non-negotiable ways to support your immune health. This involves eliminating refined sugar, refined oils, artificial ingredients, processed foods, and junk food, and focusing on the following top immune-supporting foods:

- Lemons and limes
- Bone broth
- Garlic
- Onions
- Apple cider vinegar
- Olive oil
- Ginger
- Mushrooms

Go Outside!

There are several lifestyle changes that can help you fortify your immune system and make you less vulnerable to illness. One of these is to get active and spend more time outdoors! Your body needs fresh air, sunshine and Vitamin D; all of which you can get FREE, simply by taking a walk outside.

Hydrate!

Your body needs water more than it needs food. Drink at least 8 to 10 glasses of high-quality, clean water a day; use a high-quality reverse osmosis system that purifies your water by removing all the toxins.

Meditate

To find your balance you need to connect your mind, your body and your heart. This will help you keep your stress levels down, which in turn is key to your immune health. Try meditation, yoga and breathwork and practice your gratitude and goal-planning affirmations daily.

Alternative Immune Boosters

There are other alternative ways to help reset your immune system, including:

- Detox
- Fasting
- Intermittent fasting, and
- Coffee enemas.

When you detox, either through diet changes or by deliberately cleansing targeted areas of the body such as a coffee colon cleanse, you are cleaning out anything in your body that the cells don't need in order to function. By fasting, your body replaces old, malfunctioning cells with

fresh, new immune cells. It's similar to spring cleaning, in that you declutter your body and end up with a rejuvenated immune system.

Don't wait for a vaccine that is not being designed to protect you, but to control you. Self-immunize and get on with your life.

JOIN THE DOLLAR VIGILANTE

To connect with communities of people and information who will help you change your mindset on how to live purposefully and be mindful of your physical, mental and spiritual health needs. You shouldn't be afraid to say no to vaccines because the state tells you it's necessary to avoid death by coronavirus. The only way to do that is by making sure your body and mind are healthy! Also discover the best ways to make your money immune to the "currency virus" that's turning your life savings into buckets of worthless paper.
